Ss Cement CrkWQTreatability 071612 dlb ver5 (3).pdf

Dan,

Here are a couple reports from Sunnyside on the loading breakdown and treatment options. They do the analysis that we discussed minus the step up Upper Animas (above CC). They do different flow conditions (low, med, high) not necessarily which may or may not be as useful as specific seasonal breakdown.

There is a lot of information and may be that's part of the issue or need here is to consolidate and digest what we have in front of us before the April meeting.??

Steve
